Harry,

The team is currently reviewing your response to questions submitted on Oct. 1st as well as additional information from the CDs. We are still compiling all the information that we have.

One additional question that arose during our last conference call was a 24 hour pump test across the NW fault. Although you all indicated that a final report was never generated, we understand that a graph depicting the results of the pump test exist according to the contested case hearing transcript.

David Gillespie has asked that we obtain both the graph as well as the data from the 24 hour pump test. Your staff can send this directly to Ray Leissner and Phil Dellinger.

I will be out of the office until Tuesday, October 9th.

Thanks, Stacey

Stacey,

I'm forwarding to you two attachments. The first being a letter requesting the TCEQ to adopt the proposed Goliad Aquifer Exemption boundary as detailed in the second attachment.

I sense that we have addressed all of the Region remaining questions. We now look forward in formalizing a time line to finish the process.

Thanks in advance.

Harry
